- QCD physics cover story for the 2014 [PRACE Digest](#)
- PHP backend programming for [Ticket Systems Finland](#), a startup I'm a co-founder at

Bio

I launched my own one-man company, Klang ICT Services in August 2010. At first, I offered flexible systems administration services for small and medium enterprises and continued my affiliation with Lionbridge as a subcontracting documentation specialist. Over time, I've created a niche as a writer by combining high-quality written English output with my comprehensive ICT background. I have extensive experience in authoring client documentation from API references and developer docs to style guides, in addition to the occasional freelance tech/science journalism gig and Finnish-English translations that I do.

I'm still a sysadmin at heart, and I'm always interested in ICT assignments involving networking and enterprise systems. I have a CCNA certificate and work experience maintaining Windows domain environments (Windows Server 2003/2008) and corporate systems such as MS SQL servers & Remote Desktop Services. From the *nix side, I maintain a CentOS server for a hobbyist society of computer enthusiasts, which has given me first-hand knowledge on tasks such as PKI certificate handling and bash scripting.

When I'm not out there being the breadwinner for my family, I'm hustling it up at the local tennis and basketball courts or rocking it out with my noise rock outfit Deciders.
